**Cleanroom Furniture
Inox Furniture**

... we go further
... to absolutely clean air!

GRADAUK™

Grada UK has become a well known name in the world of ventilation and air distribution. Having over 20,000 air distribution products within our range, we are sure we can accommodate most air distribution enquiries. We are a manufacturer with a difference and do not employ sales people, all our personnel are fully qualified air distribution engineers.

We are proud of the service we provide from selection, manufacture to delivery. All our products are manufactured under one roof and in our control. We have a test laboratory and Thermal Imaging service available for anyone to use for proof of selection. Therefore if you have a Design and Build project or an Architect or Consultant, we have the air distribution know how.

To complete the service, once the order is placed, your order will be given a contracts manager to process the order and keep you informed right through until delivery.

What we can do for you?

This catalog contains information about standard cleanroom furniture made out of Inox, **but we specialise in indentifying and supplying absolutely anything the customer requires.**

Cleanroom furniture is used by many different industries to prevent contamination and to prevent the spread of bacteria, viruses, etc. It is used in Pharmaceutical and Medical applications, but also in Electronics, Engineering, Automotive, Optical, Food and other industries.

Specie in cleanroom is very important, every square metre is expensive. As a result there are no standard solutions and no standard sizes.

The stainless steel (Inox) cleanroom furniture consists of vertical supports and perforated or other material tops. The furniture is easy to maintain and move, suitable for every cleanroom space.
