

ROUND VARIABLE SWIRL DIFFUSER

TYPE: WR600 • WS600

Installation dimensions

Application

The round Variable swirl diffusers WR600/WS600 is designed for air supply in rooms with floor to ceiling heights 4-12 m, with high induction requirements.

Diffuser is made from nozzle shaped casing, reducer and air guidance elements with 6 blades. Blades turn simultaneously with following type of mechanism: manual, motor driven en thermostat element.

Thermostat element has operating range between 15°-30°C. Thermostat adjust blade angle according to the temperature of supply air. Blade angle is factory preadjusted so that the temperature of supply air 30°C angle is 90°, at temperature 20°C angle is 35°.

Advantages: no additional power supply and controls are required, so no additional wiring installation is needed. Blade angle according to the supply air is always optimal.

All dimensions in mm

Technical information

- steel and aluminium combination
- painted white (RAL9010)
- manually adjustable blades with β = blade angle
- optional: perforated plate in the collar of the diffuser

How to order

WR620, size 250 mm
